13. ABSTRACT *(Maximum 200 words)*

The *Cape Photographic Durchmusterung* (CPD, Gill and Kapteyn 1895–1900) is a photographic survey of southern stars in the declination range –18 to –90 degrees. This volume covers the declination range –18° through –37°. Positions are given for the 1875 equinox. The summary of the positional uncertainties quoted in the third volume of the published catalog gives ± 0.28 sec (R.A.), ± 0.044 arcmin (Dec.) for zones –18 to –57 degrees. The probable error of a photographic magnitude, as determined by combining results for different magnitudes and weighting proportionately according to the numbers of stars in each class of magnitude, is given as ± 0.055 mag. From an analysis of the faint magnitude limits on the plates discussed in the third volume introduction, the catalog as a whole can be considered complete to photographic magnitude 9.2, but it is stated that it will be found practically complete, in or near the Milky Way, to magnitude 9.5.
